Managed Services Plan 2023

MONITORING

-Automatic Program and Operating System Patches Improves PC Performance and Security

-24/7 Health Check can identify issues early

-Coverage includes Managed Anti-Virus, Monitoring of Disk Space, Internet Security, Hardware, and Performance

SECURITY

-Desktop/ Laptop Protection

-Malware Prevention

-Policies and Guidance

Web Protection (Internet)

-Filtered Access Options

-DNS Filtering

-Desktop/Laptops on the move, are protected from websites pushing malware, phishing sites, proxies, spyware and adware, botnets, and SPAM.

-90% of Attacks come from Malicious Websites. Without this level of protection, it's all too easy for users to stray onto websites, which might appear safe, but can actually deliver a malicious payload to their computer. Besides the time and cost of cleaning up viruses and the loss of productivity from malware slowing down systems, there are bigger risks to consider. When passwords are stolen through a phishing attack, there can be devastating results for a business, including reputation damage, data breach and loss of intellectual property.

Continuity

Coverage: AntiVirus, Internet Protection, Monitoring, Automated Patches, Performance, Security, Hardware, Disk Health, Policies and IT Governance.
